With the added feature of being able to create a template job in Awetest 2.5 users can now have job settings that they repetitively use and save them as a template. This makes it extremely easy to efficiently run tests that need to be run multiple times with just the push of a button.

The job template can be customized to fit any desired test case/environment/worker environment combination.

See the following document for step-by-step instructions:

• From the home screen of <u>www.awetest.com</u> go to Web > Jobs.
